

Jones Chiemela Egelle

Frontend Engineer

Lagos, Nigeria | +234 902-442-3438 | egellejones@gmail.com | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Frontend Engineer with 1.5+ years of professional experience building responsive, performant web applications across DeFi and pharmaceutical e-commerce platforms. Proficient in React, Next.js, and TypeScript with a strong track record of translating Figma designs into production-ready component libraries, integrating complex REST APIs, and optimising client-side performance. Complements this with a self-directed track record of shipping full-stack projects independently, and comfortable working across the full frontend lifecycle from architecture to deployment.

TECHNICAL SKILLS

- **Languages:** JavaScript (ES6+), TypeScript, HTML5, CSS3
- **Frameworks & Libraries:** React.js, Next.js, Node.js, Redux Toolkit, Zustand
- **UI & Styling:** Tailwind CSS, Shadcn-UI, Material-UI, React-Bootstrap, Styled Components
- **Backend & Databases:** Node.js REST API design, Appwrite (BaaS/NoSQL), GitHub OAuth & authentication flows, third-party API integration
- **Tooling & Practices:** Git & GitHub, Jest (unit testing), Vite, Axios, Figma, REST API integration, code-splitting, lazy loading, performance optimisation, agile collaboration

PROFESSIONAL WORK EXPERIENCE

Phammer

Lagos, Nigeria

Frontend Engineer

Sep 2025 – July 2026

- Engineered responsive, reusable UI components for a pharmaceutical B2B marketplace platform, translating Figma designs into production-ready interfaces using React, Tailwind CSS, and Shadcn-UI.
- Implemented global state management with Redux Toolkit across cart, authentication, and UI flows managing complex multi-vendor product data and user sessions across 10+ interconnected components.
- Integrated dynamic inventory and content APIs via Axios, introducing code-splitting and lazy loading to improve catalogue load performance and user experience for early-stage marketplace users.
- Contributed to cross-functional feature planning and established performance monitoring practices, collaborating directly with design and product teams ahead of platform launch.

Independent Study & Project Development

Remote

Frontend Developer (Self-Directed)

Feb 2024 – Aug 2025

- Deepened full-stack proficiency between engineering roles by building Movie Cloud, a movie discovery app integrating the TMDB API with a persistent Appwrite database and Zustand-managed state for real-time content discovery.
- Developed Code Tips, a full-stack tool with a Node.js REST API and secure GitHub OAuth integration, reinforcing state management, API architecture, and auth patterns ahead of re-joining full-time engineering at Phammer.

Lithium Finance

Remote

Frontend Engineer

May 2023 – Feb 2024

- Built and maintained the user-facing interface for a venture-backed DeFi protocol (\$5M raised, Pantera Capital) that uses collective intelligence to price illiquid assets where UI accuracy and data reliability were business-critical.
- Optimised client-side rendering using Next.js and TypeScript, reducing initial load times and improving Core Web Vitals scores on a live financial data platform.
- Contributed 9000+ lines of production code to an established codebase via Git, maintaining strict code quality, documentation, and consistency standards across a distributed team.
- Collaborated with engineering leads and business stakeholders to triage, debug, and ship features against structured delivery timelines in an agile fintech environment.

Synapse Network

Nigeria

Community Manager

Jan 2023 – Apr 2023

- Managed community growth and digital engagement for a cross-chain Web3 launchpad (Chainlink partner), coordinating audience campaigns across Discord, Twitter, and digital channels during active product launch periods.
- Devised and executed structured content strategies that increased platform user influx, working cross-functionally to maintain consistent brand messaging across multiple digital touchpoints.

Seven Up Bottling Company

Abia State, Nigeria

IT Support Specialist (Intern)

Mar 2022 – Sep 2022

- Provided end-user IT support across a high-volume manufacturing plant operated by Nigeria's largest Pepsi bottler, maintaining operational uptime during an active company-wide digital transformation programme.
- Diagnosed and resolved hardware, software, and network faults; configured and deployed workstations plant-wide in coordination with the IT superintendent, supporting daily production operations.

EDUCATION

Bachelor of Engineering in Computer Engineering (B.Eng)

2017 – 2024

Michael Okpara University of Agriculture, Umudike · Abia State, Nigeria

PROFESSIONAL DEVELOPMENT AND CERTIFICATION

TS Academy – Phoenix Cohort, Frontend Development Certification

2026

Completed while employed full-time at Phammer: a structured, cohort-based certification undertaken to formally validate self-taught expertise, benchmark against current industry practices, and broaden exposure to team-based agile delivery workflows.
